

NAVIGATIONAL AIDS

Millard masts are used by marine agencies worldwide to support navigational aids for coastlines and shipping channels. Entire assemblies are light enough to be flown into remote locations where they can be easily installed on difficult and irregular surfaces such as rock and tundra. While light enough to be hand lifted, masts are also strong enough to support climbing and heavy equipment loading. Masts are engineered to last decades in extreme climates while requiring virtually no maintenance.

Tripod Mast

Millard masts come in a variety of designs each possessing their own unique advantages – reduced footprint, quick installation, easy servicing, robust performance – all suited for a diverse array of applications. Despite their differences, all masts are engineered to withstand the toughest coastal environments. Millard also offers a complete line of accessories including platforms, ANSI ladders, DBI fall arrest kits, anti-climb guards, and custom equipment mounts.
