

TR-7750U UHF AM DIGITAL RADIO

www.jotron.com

Jotron 7000 Series

- Excellent RF performance in congested areas
- Advanced digital signal processing (DSP)
- Remote control through Ethernet
- Easy set-up and control
- Compact design
- In-band signalling for PTT and squelch
- Continuous duty cycle
- Offset carrier
- VoIP according to ED-137
- Start-up time <10 seconds
- Parallel operation (analogue and VoIP interfaces)

Excellent RF performance in congested areas

Careful analogue design is the key to achieving the best collocation capabilities possible. The 7000 series of radios are designed without compromising the synthesizers and analogue front end. Together with a linear power amplifier design and strict control by an ultra fast digital signal processor, making these the ultimate radios of choice for professional air traffic control applications.

Advanced digital signal processing (DSP)

The receiver and transmitter use the most powerful digital signal processors to perform the intermediate frequency (IF) and the audio frequency (AF) filtering. In addition, all the modulation and demodulation tasks are performed in the signal processor. This means improved product control, less tunable parts and improved reliability.

Remote control through Ethernet

The radio has alternative ways of being controlled, allowing it to fit easily into an existing onsite infrastructure. The radio is controlled and monitored using Simple Network Management Protocol (SNMP) and the Jotron dedicated Remote Control and Monitoring System (RCMS) or by a standard SNMP management application. Alternatively, setup and control can be either TCP/IP on the Ethernet, or the RS232/RS485 ports. The radio has a built in web-server for displaying current status and historical events.

Easy set-up and control

All parameters can be set and adjusted electronically from the front panel or from the remote interface. The front panel contains a graphical display, menu buttons and switches that are used during set-up of the radio.

Compact and flexible design

A complete transceiver consists of 3 units; transmitter, receiver and power supply. A 3U/19" sub-rack can hold one transceiver, up to 6 receiver units or 2 transmitter units, therefore offering a flexible and compact design.

BITE system

The Built In Test Equipment (BITE) system con-

tinuously monitors the technical parameters and reports real-time activity.

Keying options

The transmitter includes the following keying options: Positive and negative voltages (up to 50V), ground keying and phantom keying on the audio line. In addition, in-band tone signalling with configurable tones for easy integration is also an option.

Duty cycle

The transmitter is designed for continuous duty cycle. The unique cooling concept in the transmitter, keeps the temperature low, ensuring the best maximum operational life. This makes the radio the perfect choice for VOLMET and ATIS applications requiring continuous transmission.

Offset carrier

Up to 5 offset carriers are available using the temperature controlled oscillator in the transmitter.

Squelch system

The squelch system consists of a level and a noise compensated squelch, both are adjustable, which is useful in radio frequency congested areas. Relay contacts with configurable logic and in-band tone signaling are available, making this system flexible.

VoIP according to ED-137

VoIP has been an option in Jotron radios since 2009. These radios are fully compliant with the ED-137 standard. Additional options for IPv6 and G.729 compression codec for use through connections with bandwidth limitations are available. By using VoIP interface the audio delay is minimalized, therefore, comparable to a radio operated with an analogue or a TDM line.

Parallel operation on all interfaces

A Voice Communication and Control System (VCCS) using an analogue interface can be connected and operated in parallel with a VCCS VoIP interface, allowing a seamless transition between analogue and VoIP.

► TECHNICAL SPECIFICATIONS

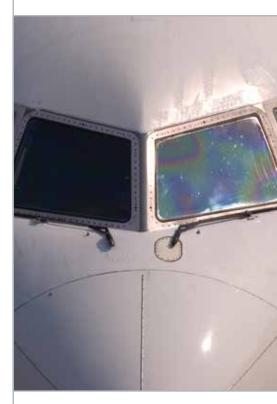

C All '			514	
<u>General – All units</u>	AM 25 kHz	AM 12,5 kHz	FM	
Frequency range	225-400 MHz			
RF Modes	6K80A3EJN	5KOOA3EJN	0.5	
Keying time	< 25ms	< 25ms	< 25ms	
Frequency response	300-3400 Hz	350-2500 Hz	300-3400 Hz	
Frequency stability	<1.0 ppm			
Data ports	RS232, RS485, Ethernet (100BaseT)			
Protocol	Remote control: SNMP (UDP/IP), Jotron monitoring (TCP/IP) Voice over IP: RTP (ED-137)			
BITE monitoring	VSWR, Voltages, Currents, Levels, Lock detect, Temperature, Output power, Reflected power, a.o.			
Supply voltage, AC	85 to 264VAC, 47-63Hz			
Supply voltage, DC	21.6 - 31.2VDC negative around			
MTBF	>10 years / unit			
MTTR	<30 minutes at lowest replaceable unit			
11111				
Transmitter (TA-7650U) Output power	AM 25 kHz 1-50W	AM 12,5 kHz	FM	
		60 dDo	E E dDo	
Adjacent channel power Modulation level	>65 dBc up to 95%	>60 dBc	>65 dBc	
Distortion	< 5%	Dm		
Line input	600 Ω , -40 - +10d		with at least 20 dD	
Intermodulation attenuation		>70 dB when interfering signal is decoupled with at least 30 dB		
<u>Tx timeout</u>	10s to 5 min in 10s			
Inband keying	Configurable tone	s: 2000-4000Hz		
Carrier offset	2,3 or 4			
Differential group delay	<60µs			
VSWR	1 : Infinity			
Duty cycle		operation@ambient below	40°C	
Power consumption	<400VA			
Dimension Transmitter unit	142mm(28TE)(W) * 330mm(D) * 128mm (H), Weight 3.8 kg			
Dimension PSU unit	71mm (14TE)(W) * 303mm(D) * 128mm (H), Weight 1.3 kg			
Broadband noise	<150dBc/Hz @1%	offset		
Spurios emissions	<-80dBc			
Receiver (RA-7203U)	AM 25 kHz	AM 12,5 kHz	FM	
Sensitivity analogue @1µV / 30% pd	10dB SINAD (CCIT	T)		
Adjacent channel rejection	>75dB	>70dB	>80dB	
Intermodulation	>75 dBc			
IF bandwidth	+/- 11kHz	+/- 3.5 kHz	+/- 11 kHz	
Image and IF frequency response	>110 dB	>110 dB		
Squelch operation	Adjustable -112 dBm to -65 dBm/ 5 dB S/N to 20 dB S/N			
	Combination of RF level and Signal/Noise (digital coherent squelch)			
	Activation time <20ms			
		.01113
